

## Balance Index Spectrum (BIS)

### "Energetic Coherence Score"

#### Oneness Movement (OM)

#### 1 · What BIS Measures

Vector	Spark (1) – Expulsive / Entropic	Intention (0) – Attractive / Syntropic
E-1 Energy / Resources	How much fresh fuel is drawn in, how fast it is burned or scaled.	How completely inputs are recycled or regenerated.
E-2 Innovation / Change	Novel ideas, market disruption, experimentation.	Integration, documentation, continuity, reliability.
E-3 Visibility / Broadcast	Marketing reach, charisma, public footprint.	Listening channels, transparency feedback, community governance.
E-4 Autonomy / Speed	Decision velocity, individual agency.	Interdependence, stakeholder consent, systemic alignment.

Spark scores  $\Delta S$  (0–10) reflect outward push in each row; Intention scores  $\Delta I$  (0–10) reflect inward pull.

#### 2 · Quick Formula

$$\text{BIS}_{\text{raw}} = \left( \sum \Delta I - \sum \Delta S \right)$$
$$\text{BIS}_{\text{scaled}} = 10 \times \frac{\text{BIS}_{\text{raw}}}{40} \rightarrow [-10, +10]$$

- A perfectly balanced project ( $\sum \Delta S = \sum \Delta I$ ) → **BIS ≈ 0**.
- Surplus Intention (regeneration > extraction) pushes BIS toward **+10**.
- Surplus Spark (consumption > return) drags BIS toward **−10**.

#### 3 · The Balance Index Spectrum

Score	Descriptor	Qualitative State	Typical Flags
+10	<b>Toroidal Mastery</b>	Self-replenishing, near-zero entropy leak; Spark drawn straight from ambient renewables / circular flows.	Closed-loop manufacturing, net-positive ecology, open-source culture with thriving maintainers.
+7 to +9	Regenerative Excellence	Intake is small vs. output value; waste streams feed other loops.	B-corps, agro-forestry, fusion-powered datacentres.
+4 to +6	Healthy Balance	Minor surplus Intention; redundancy and resilience built in.	Community land-trusts, slow-growth co-ops.
+1 to +3	Slightly Syntropic	Balance tilts constructive but still dependent on external Spark.	Most well-managed SMEs, mindful diets.

Score	Descriptor	Qualitative State	Typical Flags
**0**	Dynamic Neutral	In-flow matches out-flow; system can tip either way.	Standard utilities, balanced household budget.
-1 to -3	Mild Spark Overuse	Waste visible but correctable.	Fossil-powered logistics, click-bait media.
-4 to -6	Unsustainable Imbalance	Extraction or churn exceeds feedback capacity.	Fast-fashion, monoculture farming, crunch-time software teams.
-7 to -9	Degenerative Spiral	Rapid entropy build-up, social & ecological debt.	Strip-mining, predatory lending, dark-pattern apps.
-10	Collapse / Stasis	Feedback loops broken; system destined for burnout or crash.	Dead oceans, abandoned towns, Ponzi schemes at bust.

## 4 · How to Use BIS in OM Dashboards

1. **Pair with CIS & WIS:** *CIS* asks “How expansive is the actor’s consciousness?” *WIS* asks “What magnitude of impact occurs?” **BIS** now asks “How sustainably is the energy handled while that impact unfolds?”

### 2. Decision Triage

- Projects with WIS+8 but BIS−4 = “High impact, high leak” → redesign for circularity.
- Personal habits CIS+5 but BIS−1 = “Good intent, mild waste” → adjust diet, transport, media use.

3. **Iterative Feedback** Re-score quarterly; target **BIS** ≥ +4 for all flagship OM initiatives by 2028.

## 5 · Worked Micro-Example

Row	ΔS	ΔI	Comments
E-1 Energy	7 (imported steel, diesel)	3	Heavy inputs, little recycling
E-2 Innovation	8	6	Fast pivot culture, moderate integration
E-3 Visibility	6	5	Big marketing, some community co-creation
E-4 Autonomy	9	4	Founders move fast, limited stakeholder consent

$\Sigma\Delta S = 30$   $\Sigma\Delta I = 18$   $BIS_{raw} = -12$   $BIS_{scaled} \approx -3 \rightarrow$  “Mild Spark Overuse”

Action: add regenerative supply-chain loop & participatory budgeting to lift Intention scores.

## 6 · Graphic Cue

Visually place **BIS** as a horizontal bar beneath CIS & WIS numbers:

+10 |■■■■■■■■■■■| BIS +6.5 (Green)  
 0 |■■■■■■■■■■■| BIS −3.0 (Amber)  
 −10 |■■■■■■■■■■■| BIS −8.7 (Red)

Colour-codes: *Green* ≥ +4 | *Amber* −3...+3 | *Red* ≤ −4

## One-line pitch

*BIS condenses the Spark–Intention equilibrium into a single, trackable number—letting OM see, at a glance, whether any person, project, or policy is fueling the spiral of syntropy or leaking creative life-force into entropy.*
